# CURTAIN TIE BACKS

## Order Form and Product Guide

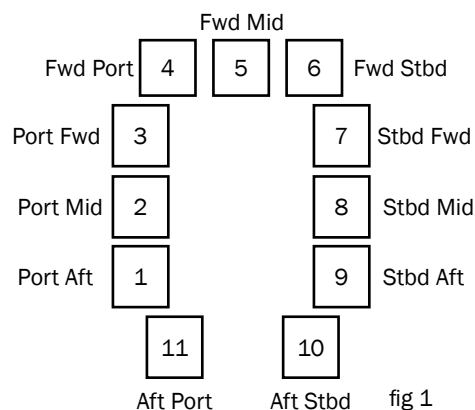

### Notes

## Window ID and Location

To avoid confusion, Dometic works in an order of location and reference number for orders. Therefore, for residential applications itemise curtain starting from the left of the room giving an ID and a description of the Window location, for example:

- **ID - 1,**
- **Window Location** - Lounge Side window

However for marine vessels please use the following to describe the location (fig 1).

A photograph of the window or recess submitted with order can help to ensure correct design and operation of the curtain.

### Curtain width

We always take into consideration Curtain pleat type and total number of drops when calculating and manufacturing Tieback finished width, this will enable Tieback to embrace Curtain without pulling this in too tight, avoiding any creasing on the Curtain when this is drawn close.

When ordering Tieback only, please supply Pleat Type and Curtain Width, this will enable us to manufacture the correct size for your existing curtains.

### Quantity - Pair or central stack

A pair of tiebacks will be supplied if a pair of curtains is fitted to a window opening,

### Single stack

A single Tieback will be supplied If a single curtain is fitted to a window opening,

When ordering Tieback only, please supply curtain stack positions, this will enable us to identify the leading edge of your existing curtains, we will endeavour to hide any visible joins on Tieback behind your curtain.

## Sheer

Please note, with all sheer/voile curtains, Tieback width is reduced due to the density of this material and to avoid Tieback being too loose and not holding curtains back.

When ordering Tieback only, please confirm if your existing curtains are sheer/voile.

All Tiebacks manufactured with a non sheer fabric will be lined in the same fabric as curtains.

## Fire Retardant

A selection of fabrics in the Dometic fabric collection are certified to British standards however Dometic will confirm if your selected fabric can be treated to pass British Standard (BS) or International Maritime Organisation (IMO) Fire Retarding standards. If batch testing is required for IMO Certification, a 1 metre<sup>2</sup> 39<sup>2</sup>" sample of fabric is required for this and additional certification costs will apply.

## Pleat Type

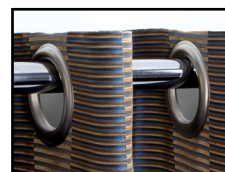

As mentioned above in "Curtain Width" section, we need to take into consideration curtain pleat types as they have different fullness ratio when calculating Tieback finished Width, we will manufacture and supply the correct size Tieback when ordered in conjunction with any of our curtains.

When ordering Tieback only, please confirm your existing curtains Pleat Type, our most common Pleat Types and fullness ratio are as follows;

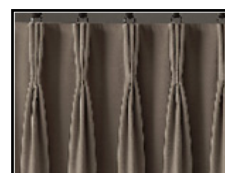

**Pencil Pleat 75mm**  
**Fullness ratio 2x**

**Eyelets**  
**Fullness ratio 2x**

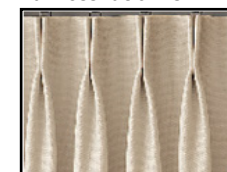

**Triple Pleat**  
**Fullness ratio 2.5x**

**Pencil pleat 50mm (Shower curtain)**  
**Fullness ratio 1.5x**

**Double Pleat**  
**Fullness ratio 2.5x**

**Ripple Pleat (sheer)**  
**Fullness ratio 2.5x**

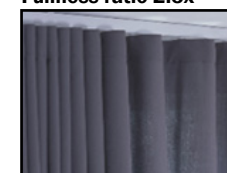

**Channel Pleat**  
**Fullness ratio 2x**

**Goblet Pleat**  
**Fullness ratio 2.5x**

**Wave Pleat (unlined)**  
**Fullness ratio 2.5x**

## Tieback Types

A tieback is a decorative strip of fabric or cord, typically used for holding an open curtain back from the window; at Dometic we have several types you can choose from to suit your curtains and room. All our tiebacks are reinforced with buckram for stability with the exception of Plaits.

### Band

This can be made with same fabric as the curtains or using contrasting fabrics to bring colour and co-ordination to any room, as standard these are 100mm in depth but can be modified to any depth of your choice depending on your curtain's overall drop.

### Chevron

A very stylish version of the crescent type with a more defined shape, these can be made with same fabric as the curtains and can have piping added to the edge in either self or contrast fabric. Unlike the bands, the depth of these tiebacks cannot be modified as this will change the shape of the overall Tieback.

### Crescent

A traditional and our most popular shape, as per the Chevron, these can be made in a selection of fabrics and finishes.

### D Band

A hybrid of the Band and Crescent Tiebacks, with a more contemporary look. As per Chevron and Crescent, these can also be made in a selection of fabrics and finishes.

### Plaits

As the name suggests, these Tiebacks have three strips of fabric made into a traditional plait, you can have these using one, two or three different fabrics.

### Hold Backs

We can supply wooden or metal hold backs that complement your pole or track. Please contact a member of our team for further details.

### Tassel

We can supply a wide range of beaded and rope tassels to complement your room and other soft furnishings, please contact a member of our team for further details.

### Finish

There are several finishes that you can choose from depending on Tieback type, these are as follows;

## Contrast

A small contrast top and bottom can be added to Band only,

### Contrast Piped

5mm cotton piping covered in a contrast fabric of your choice or a Trim or Braid can be added to the outer edge for Chevron, Crescent and D Band only.

### Plain

No contrast or piping will be added to the Tieback of your choice.

### Plait, 1 fabric

Only this fabric will be used for all three strips when creating the Plait.

### Plait, 2 fabrics

2 strips of the same material and one contrasting strip of material will be used when creating the Plait.

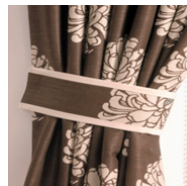

### Plait, 3 fabrics

3 strips of different fabrics will be used when creating the Plait.

### Self Piped

5mm cotton piping covered in same fabric as your Tieback can be added to the outer edge for Chevron, Crescent and D Band only.

**Contrast band  
top & Bottom**

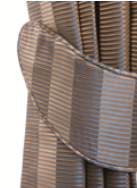

**Plain band**

**Chevron  
contrast piping**

**Crescent  
self piped**

**D Band  
self piped**

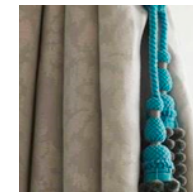

**Plait  
3 colours shown**

**Metal  
Holdback**

**Tassel**

## Samples of Tieback Type & Finish

### Restrain Rings

All Tiebacks are manufactured a standard with Hollow Brass Rings which are hand sewn at the back of the Tieback, these can be then be fixed to the restrain hooks holding Tiebacks in place.

### Brass Rings

These will be fitted as standard with all manufactured Tieback Types.

### Brass “D” Rings or Chrome “D” Rings

These can be the added to the end on your Tieback and will be visible when attaching them to the Restrain hooks, you can select Brass or Chrome finish to co-ordinate with your pole/track and room features

### Restrain Hooks

As a standard Dometic will supply 2 restrain hooks per Tieback manufacture, please confirm type and colour required, these are as follows;

### Standard Restrain Hooks

Colours available are Brass, Chrome, White and Black.

### Custom

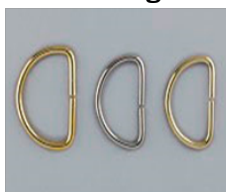

Please contact a member of our team for further details

“D” Rings**

**Brass “D” Ring with  
Custom Restrain  
Hook**

**Standard  
Restrain Hooks White,  
Brass & Chrome**

### Restrain Rings & Hooks

#### Main, Contrast Fabric & Trims

Please refer to the Dometic website for available fabrics. Specify any custom fabric options on our order form.

Fabrics in the Dometic Fabric Collection are dry cleaned only.

To add to the design, a contrast fabric from either the Dometic Fabric Collection or a fabric of your choice can be added to the main fabric; alternatively a trim or braid can be added to the edge of some Tieback Types instead of piping.
